

Advertorial

Spring has finally sprung and we're all looking forward to the prospect of sunny days and lounging in the garden. The problem for many of us, however, is that due to work commitments and other time constraints, we spend our weekends working to make our garden a place fit to relax in, instead of actually enjoying it!

Weeds, moss, climate, disease, pests and many other factors can have a negative impact on the health and appearance of your lawn; unfortunately, without specialised products and knowledge, it can be hard to nurse your lawn back to health.

That's where Luxury Lawns can help; this independent, family run business operating within a 20 mile radius of Stamford Bridge offers a wide range of professional lawn care services that won't break the bank. With prices starting from as little as £13, we can bring tired or damaged lawns back to life for you, so you can put your feet up and relax.

Seasonal fertilisation and weed control treatments work to ensure that your grass grows lush and dense, with a healthy deep green colour, targeting weed variations that can become a pest at different times of the year. In addition to our season-based treatments, we also offer a whole host of other services that will improve the quality and appearance of your lawn. These include:

- Scarification
- Solid and Hollow Tine Aeration
- Over Seeding
- Top Dressing
- Water Conserver Treatments
- Lawn Growth Retardants
- Disease Control
- Pest Control
- Driveway/Patio Moss and Weed Control

We offer a FREE lawn survey and quote to all of our customers, so that we can identify your specific needs and advise you on the best course of action. You're not tied in to any contracts, so you can choose from a series of services or a one-off treatment - it's entirely up to you.

You will benefit from expert advice and the knowledge that you're garden is a safe haven for you, your children and your pets - and what's more, you won't need to buy multiple products throughout the year that require safe storage and that will deteriorate over time.
